

ABSTRACT OF THE DISCLOSURE

An amusement article for a domestic animal comprising an outer textile casing defining a shape in the form of a small article which can be carried by a domestic animal, an inner filling, and a microbe-inhibiting agent or property applied to at least one of the outer textile casing and the inner filling. The toys may be fabricated in various shapes, designs and styles, e.g., animals, bones, hearts, geometric shapes, etc. A process for applying the microbe-inhibiting agent or property to at least one of the outer textile casing and the inner filling is provided. Application methods include spraying, dipping, brushing, and rolling the microbe-inhibiting agent or property onto at least one of the outer textile casing and the inner filling.
